

Helix v3 — Plan Mode, Activity, Gradebook, Board

Four additions: one in the editor's AI chat, three in Spaces. Everything works with the accounts, Spaces, and editor you already have.

Plan mode in the AI chat

EDITOR

A Plan/Build switch next to the chat box. In Plan, the agent only reads your project and replies with a numbered implementation plan — what changes, in which files, and why. Nothing is written until you press **Approve & build**; **Revise** lets you adjust the plan first. Useful before bigger changes.

HOW IT WORKS

A plan turn runs the same agent with its tool list cut to read-only (`list_files`, `read_file`, `search_files`) and a planning prompt; write tools are also blocked server-side. Approving sends the plan text back as a normal build turn.

Space activity feed

SPACES

Every Space now shows what happened recently: who joined or left, which projects were shared or pushed to git, assignments posted and submitted, tasks added and completed. Opens automatically on the Space page; quiet until there's something to show.

HOW IT WORKS

Routes record one event row after each action (never failing the action itself); `GET /api/spaces/[id]/activity` returns the latest 50 to members only. Grades are never shown in the feed.

Classroom gradebook

CLASSROOMS

One grid with every student and every assignment: not started, in progress, submitted, or the grade once reviewed — plus a per-student completion count. Column headers jump to the assignment's grading page. Visible to the instructor only.

HOW IT WORKS

`GET /api/spaces/[id]/gradebook` composes assignments × members × submissions in three queries and returns a cell map keyed `assignmentId:userId`.

Task board

SPACES

A three-column board (to do / in progress / done) in every Space. Any member can add tasks, drag them between columns (or use the arrow buttons — keyboard friendly), and assign them to a member. Deleting is limited to the task's creator or the Space owner.

HOW IT WORKS

A `SpaceTask` row per card; moves are a single `PATCH` whether dragged or clicked. Completions land in the activity feed.
